

Low Cost Disposable Mixer

The Disposable All Plastic Mixers are designed to offer a truly disposable low cost static mixer. May be used on standard no purge equipment for applications where multi-component reactive systems require predictable and reliable mixing.

The low cost mixer implies an economical replacement of the unit when work is completed or if accidental curing occurs within the mixer. The use of this mixer eliminates the need for costly solvent cleaning and more importantly the associated health risks involved in handling and disposal of hazardous materials.

The mixers consist of alternately reversed helix-design element sections made from high strength, solvent resistant plastic.

Advantages:

- Low initial and replacement cost
- Predictable mixing performance
- Available in many sizes and lengths
- Eliminates the need to use expensive solvents
- Low pressure drop
- Exclusive stepped end to allow "tailor-made" nozzles

Specifications:

Material of Construction

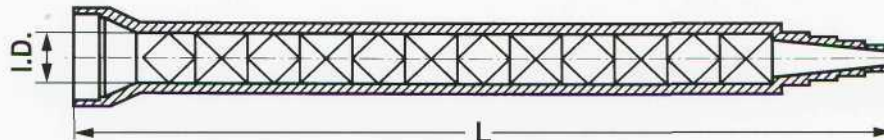

Elements: High strength solvent resistant plastic

Mixers may be ordered with Luer Lock adapters. To order a mixer with a Luer Lock adapter add the suffix LL to the mixer style. For example, a 5/16 inch by 24 element mixer with Luer Lock adapter would become DM-312-24LL.
